CAREER COUNSELLING PROGRAMME OF GIA (GEMOLOGICAL INSTITUTE OF AMERICA)

on 19.02.2016 at 2:00 P.M.

Details of the organisation:

Developing a deep understanding of the diamond industry through research and hands-on learning.

A career in gemmology backed with professional credentials can open the doors to diverse job opportunities, such as a retailer, manufacturer or designer. Companies throughout the gem and jewellery industry consistently seek trained talent to join their businesses. Each of these career paths demands an eye for detail and a dedication to quality.

For a well-rounded and comprehensive education, be sure to choose a globally recognised institute. If you're interested in diamonds, sign up for a course that exposes you to a variety of actual stones and teaches you to identify treatments, simulants and synthetics through technical concepts and hands-on training. Another important parameter for choosing a course is personalised attention. A campus tour of the institute will provide clarity on the staff, facilities and course curriculum. Opt for a programme that develops a deep understanding of the diamond industry through research-backed theory and hands-on learning. Consider your overall development in the vast field of diamonds. For instance, does the programme conduct field trips to manufacturing facilities to demonstrate how diamonds are cut and polished? Does it invite industry leaders to share their experiences and knowledge with students? For a newcomer to the industry, these features enhance the overall learning experience.
